

# LAB UPDATE

## **PHARMACOGENOMICS PANEL REPORT**

**EFFECTIVE DATE: AUGUST 20, 2019**

Dear Valued Customer:

We are reaching out to share information with you about changes to our Pharmacogenomics Panel, test code 36943, performed by Quest Diagnostics.

Here's what you need to know:

- Orders placed **on or after August 20, 2019** will receive an updated report which will include only genetic information.
- There may be a delay in issuing results to you as we modify the report and appreciate your understanding as we make this change.
- We do not expect to issue revised reports for any results issued prior to August 20.

We are making these changes to align with a shifting regulatory environment regarding pharmacogenomics reporting of specific medication data. In no way do these changes reflect the quality of MACL or Quest Diagnostics' pharmacogenomics laboratory testing services, which incorporate the most advanced technologies and scientific expertise. We appreciate your cooperation and patience as we make these adjustments.

For questions relating to pharmacogenomics testing, please contact:

Genomic Services Team (866) 436-3463 (1.866.GENE.INFO)

We value the opportunity to serve you and your patients and thank you for choosing Mid America Clinical Laboratories.
